

Reusing Intellifuel Hardware and ATG TCP/IP cards

Kachoolie now has a version that reuses all or some of hardware that you may already have if you have used the TCP/IP card, a serial to TCP/IP converter or Intellifuel systems including the Intellifuel hardware that PDI will shutdown on 1st September 2022.

In June 2022 PDI announced that as of 1st September they will no longer be providing their services with some Intellifuel Hardware.

For those affected by the announcement, please note that we have a Kachoolie version that, dependent on your Intellifuel hardware, may make the transition to Kachoolie easier and cost effective by reusing part of your existing hardware and the existing ATG setup.

If you are considering Kachoolie and have the TCP/IP card, a serial to TCP/IP converter or a built-in TCP/IP port in your ATG, we now have a Kachoolie version which reuses the hardware and the existing TCP/IP configuration. The Kachoolie is self-configuring. Just connect it anywhere on the same LAN as the ATG's TCP/IP connection.

The Kachoolie protects the ATG from cyber attacks, provides real time inventory, eliminates the need for a static IP address and router configuration.

If you want to reduce your maintenance and infrastructure costs, secure the ATG against cyber attacks, be independent of cellular coverage issues at the ATG and save money, find out more about Kachoolie.

If the folks at Insite360 see you as a very small customer with a single store or just a few stores and are not renewing your subscription, give Kachoolie a call. Kachoolie works with customers of any size and has immediate availability.
